Marcin Kozłowski

I used to sell financial products. Now I design the systems behind them.

Technical System Analyst, Full-Stack Engineer

I started in banking and leasing, where I worked with clients for seven years. Then I became a developer, and today I combine the two. I can talk to the business in its own language and give the team requirements it can actually build from.

mar.kozlowski@protonmail.com linkedin.com/in/marcinkozlowski92 github.com/skillazz skillazz.dev

7 years

in banking and leasing: Getin Noble Bank, Idea Getin Leasing and Alior Leasing

4+ years

in IT: testing, frontend, full-stack and systems analysis

The whole way

from requirements to production, which is how I work on KajGO

Experience

Sep 2026 – now

Prouniq

Technical System Analyst

Systems analysis of solutions for the financial sector. The role brings together my background in banking and leasing with hands-on engineering experience.

Apr 2024 – now

2GO Systems

Technical Product Owner, System Analyst, Full-Stack Engineer

I lead the development of features for KajGO, a SaaS event management platform: requirements from the board and customers, domain models, API contracts, implementation, and production.

Jun 2023 – now

Freelance

Full-Stack Developer

Web and mobile projects for business clients, based on React, Next.js and React Native. I cover needs analysis, estimation, delivery and integration with external APIs.

Jan 2023 – Mar 2024

Massive Pixel Creation

Web Developer

Lead engineer of an international platform for the event industry. I took part in every stage, from requirements and REST API design to implementation and release, working closely with QA, PM and UI/UX.

Sep – Dec 2022

Massive Pixel Creation
Quality Assurance Engineer

Quality of web applications: test plans and scenarios, defect reporting and verification of fixes. Experience I now use when defining acceptance criteria and UAT.

Jul – Sep 2022

Wirtualna Polska
Frontend Developer (Internship)

Frontend of wiadomosci.wp.pl, a nationwide news service used by millions of people. I delivered new interface elements in a large, distributed codebase together with cross-functional teams.

Apr – Aug 2022

Techbees.io
React Developer (Contract)

Project work on the Coraz Zdrowiej medical platform. I implemented the frontend, based on React, Next.js and TypeScript, and integrated it with the API in close cooperation with the backend team.

May 2018 – Sep 2022

Alior Leasing
Senior Sales Specialist, Finance and Insurance

Advice for micro, small and medium-sized companies on leasing, credit, loans and insurance. I ran the full cycle: needs analysis, offer, contract and after-sales service.

Nov 2016 – Apr 2018

Idea Getin Leasing
Leasing and Vehicle Finance Specialist

Needs analysis and tailored leasing and loan offers for business clients, in a fully remote sales process.

Apr 2015 – Oct 2016

Getin Noble Bank
Corporate Banking Relationship Manager

Service for companies, corporate clients and the public sector, including electronic banking and operational requests.

2013 – 2016

WSB University
Bachelor's Degree in Management

Skills

Business and systems analysis
Requirements, business rules, BPMN, user stories, acceptance criteria, impact analysis, functional specifications

Solution design
Domain modelling, REST APIs, OpenAPI, integrations, microservices, real-time communication

Engineering
TypeScript, React, Next.js, React Native, Node.js, Express, MongoDB, SQL

Delivery
Docker, Google Cloud, Azure DevOps, CI/CD, Agile, roadmap and MVP scope

Languages
Polish (native), English (C1)

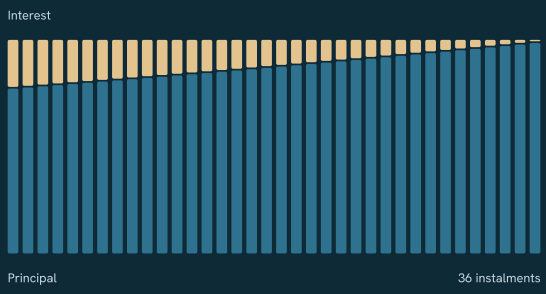

Projects

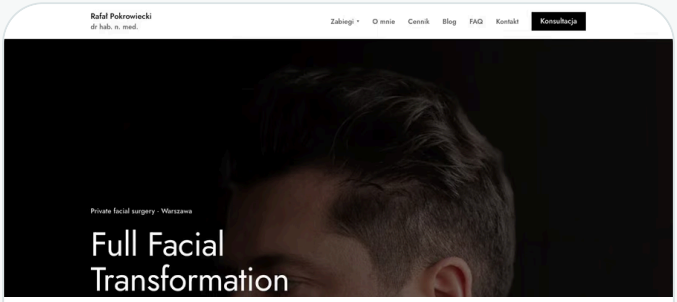

Concept

A leasing platform, from application to the books

I took a process I know from my own job and designed the system for it. With the parts people skip: what happens when the bank doesn't answer, or a client signs an expired offer.

Read the case study

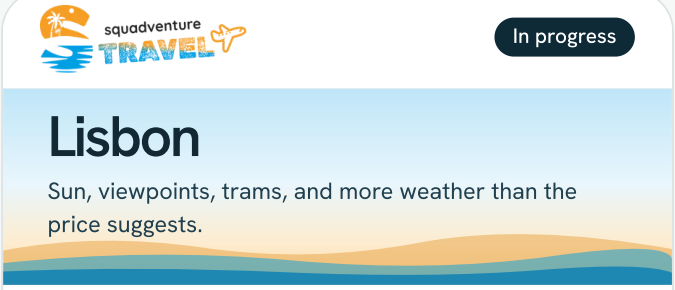

drpokrowiecki.com

A website for a facial surgeon in Warsaw. Patients can check recovery time, anaesthesia and prices before they book a consultation.

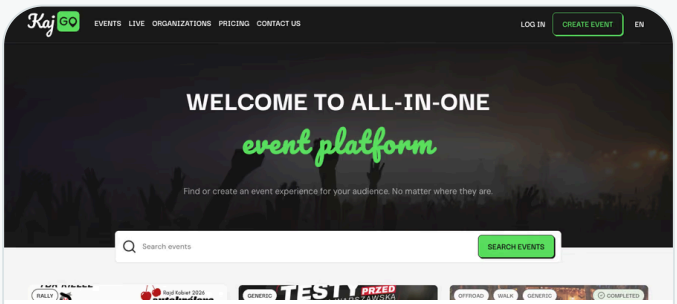

Read the case study

squadventure.pl

A travel blog that helps you decide where to go. Every guide gives the same facts: the cost, the best months, how many days, and whether you need a car.

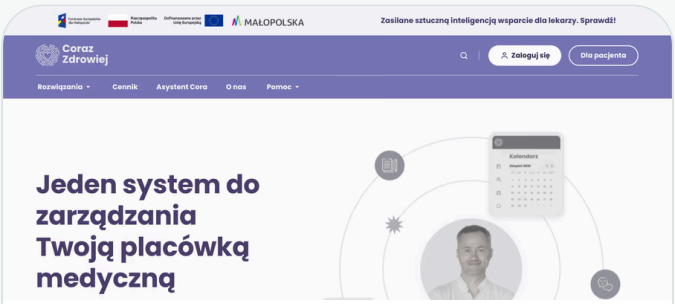

Read the case study

KajGO

A SaaS platform for running events: registration, tickets, payments, routes and live tracking. I take it from requirements to production.

Read the case study

Coraz Zdrowiej

A medical platform that connects patients and physiotherapists. I worked on its frontend, based on React, Next.js and TypeScript.

Let's talk

Do you have a system that needs to be understood, described or designed? Write to me, even if for now it's just a loose idea. Polish or English, as you prefer.
